Zusammenfassung:

DE2451167 The packing comprises a one-piece mixing vessel accommodating the main ingredient, and in which a head container for the auxiliary one is inserted. An application tip which can be broken off is formed in the base of the mixing vessel, while the base of the head container is in the form of a membrane, pierced by a spike formed on the convex and elastic top of the one-piece head container. The spike can be of triangular section, and the mixing vessel of square section, the ratio of its height to its width being approximately 3:1. The head container is likewise of square section, with its walls bearing against the inside of the vessel walls, its volume being between 1/3 and 1/4 of the vessel.
